

Flow Characteristic Curve – Q225/150SR4

Weir Flow – 2.5 L/s (20mm)

Surcharged Flow – 6 L/s (40mm)

Observation Comments:

- Flow rates from 0-2.0 L/s (20mm Head) produced a linear characteristic curve which began to flatten at 2.5 L/s.
- At 3.0-4.0 L/s the weir flow transitioned to vortex flow, cycling between vortex and surcharged flow characterised by the water level fluctuating 5mm.
- Flowrates between 5-10 L/s produced surcharged flow conditions with the water head rising rapidly to 90mm.
- The maximum flow limit to maintain weir flow conditions is 2.5 L/s.

I hereby certify that the test results presented on this outlet performance certificate are true and correct and were obtained using recognised AHSCA Gutter Outlet Testing procedures.
